

Frequently Asked Questions

Q: How does GutterStuff® perform in freezing weather?

A: Freezing temperatures have no effect on GutterStuff®. Since the foam filter keeps the down spout from clogging, there is never any surplus water left in the gutter, thus no freezing.

Q: Does water in the gutter run over during heavy rainfall?

A: No. The filter is non-absorbent so it allows large volumes of water to flow right through.

Q: Does GutterStuff® need to be cleaned?

A: Yes. It does require some light maintenance. Every 6 months it is recommended to use a leaf blower or garden hose to clear stubborn debris caught in the foam filter.

Q: How do you install GutterStuff® around the gutter spikes?

A: It simply slides underneath the gutter spikes.

Q: Do birds, squirrels, insects, or other small animals harm the foam?

A: No. Not only has GutterStuff®'s durability been tested for over 5 years, but the foam filter is coated with a germicide that repels insects and keeps mosquitoes from breeding within the gutters.

Q: Do UV rays or heat from sunlight harm the foam?

A: No. The coating on GutterStuff® contains a UV stabilizer that protects the foam filter from the sun's heat and rays.

Q: Can strong wind blow GutterStuff® out of the gutter?

A: No. It is secure because it fits snugly in the gutter and under the spikes.

Q: How long has GutterStuff® been on the market?

A: GutterStuff® was first marketed in the first quarter of 2003.

Q: Does GutterStuff® come with a warranty?

A: Yes. GutterStuff® Basic carries a 3 year performance warranty; GutterStuff® Traditional carries a 10 year performance warranty; and GutterStuff® Pro carries a 15 year performance warranty.
